Ophthalmic Laboratory Service

The Ophthalmic Pathology Laboratory, University of North Carolina, under the direction of Dr. R.L. Peiffer, Dip., A.C.V.O., is establishing a section of Comparative Ophthalmic Pathology.

As a service and as a means of accumulating teaching and research material, the laboratory will process and interpret globes and tissue from the orbit and adnexa of animals. Telephone reports will be available within five days and written reports within ten days after receipt of specimens, which should be mailed in 10% buffered formalin and accompanied by a clinical history. While the service is free, a $10.00 (ten dollar) handling and material charge should accompany each specimen.

Tissues should be sent to:

INDICATIONS AND DOSAGE

EQUIZOLE A® Liquid Horse Wormer
(thiabendazole-piperazine citrate)

INDICATIONS: For the treatment of infections with large strongyles, small strongyles, pinworms, *Strongyloides*, and ascarids in horses.*

DOSAGE: Each fl oz of EQUIZOLE A (thiabendazole-piperazine citrate) Liquid contains 2 g thiabendazole and 2.5 g piperazine and will treat 100 lb body weight.

USE DIRECTIONS: EQUIZOLE A Liquid is designed to be given by stomach tube or as a drench. To promote rapid flow through the stomach tube, EQUIZOLE A Liquid should be above 60°F (15°C). Shake well before using. At 1 fl oz per 100 lb it is highly effective against the genera listed below.

CAUTION: Do not use in horses to be slaughtered for food purposes. 0.18% methylparaben and 0.02% propylparaben added as a preservative.

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

*Including members of the genera *Strongylus, Cyathostomum, Cylicobrachytus* and related genera, *Craterostomum, Oesophagodontus, Poteriostomum, Oxyuris, Strongyloides*, and *Parascaris*.

EQUIZOLE B® Horse Wormer
(thiabendazole-trichlorfon)

INDICATIONS: For the control of large strongyles, small strongyles, pinworms, *Strongyloides*, ascarids and bots in horses.*

DOSAGE: A 1-2/3 oz package will treat a 1000-lb horse. For larger or smaller horses, a 0.42 oz package is available (treats 250 lb body weight).

USE DIRECTIONS: For a satisfactory diagnosis, a microscopic fecal examination should be performed prior to worming.

EQUIZOLE B, at the recommended dose rate of 2 g of thiabendazole and 1.8 g of trichlofon per 100 lb of body weight, is highly effective against all genera listed below.* It may be given by stomach tube, drench, or in feed.

Stomach Tube or Drench—Tear off top of appropriate size package so that entire contents of both compartments are emptied into a suitable container. Add 5 to 10 fl oz of water. Stir until thoroughly mixed and give by stomach tube or drench. This suspension may be stored for 24 hours. Prepare doses individually.

Feed—Sprinkle the entire contents of both compartments of the package on a portion of the usual daily ration. Allow horse to consume all of the medicated feed before additional feed is given. Remove and destroy any medicated feed not consumed within 12 hours after being offered. Not all horses will consume medicated feed.

NOTE: Some horses are quite selective about their rations and do not readily accept changes or new ingredients in their diet. A few hours' fast or a moist feed containing molasses or sweetened with sugar may help improve acceptability in such animals.

Each 1-2/3 oz packet contains 20 g thiabendazole and 18 g trichlorfon. Each 0.42 oz packet contains 5 g thiabendazole and 4.5 g trichlorfon.

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

WARNING: Do not use in horses to be slaughtered for food purposes. Use Only As Directed.

CONTRAINDICATIONS: Do not treat sick or debilitated horses, colts under 4 months of age, mares in the last month of pregnancy, or animals other than horses. Do not administer intravenous anesthetics, especially muscle relaxants, for a period of 2 weeks after using.

WARNING: Do not use this product on animals simultaneously or within a few days before or after treatment with or exposure to cholinesterase-inhibiting drugs, pesticides, or chemicals. Do not allow poultry access to treated feed, as consumption by poultry can be fatal.

NOTICE TO VETERINARIAN: Symptoms of overdosage of trichlorfon in horses are ataxia and colic. Atropine is an antidote.

PRECAUTIONS: Do not exceed recommended dose. Not for human use. Do not repeat treatment more frequently than every 30 days.

WARNING: Avoid prolonged or repeated contact with skin. Wash hands with soap and water after use. If swallowed by humans, induce vomiting by giving 2 tablespoonfuls of salt in a glass of water. Call a physician immediately. TO PHYSICIAN: Atropine and 2 PAM are antidotes. Give supportive treatment. Do not walk patient or give morphine.

*Including members of the genera *Gasterophilus, Strongylus, Cyathostomum, Cylicobrachytus* and related genera, *Craterostomum, Oesophagodontus, Poteriostomum, Oxyuris, Strongyloides*, and *Parascaris*.

CAMVET® suspension Horse Wormer
(cambendazole)

Each fluid ounce (30 ml) contains 0.9 g Cambendazole.

INDICATIONS: For the control of large strongyles *(Strongylus vulgaris, S. edentatus, S. equinus)*, small strongyles *(Trichonema, Poteriostomum, Cylicobrachytus, Craterostomum, Oesophagodontus)*, roundworms *(Parascaris)*, pinworms *(Oxyuris)*, and threadworms *(Strongyloides)*.

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

WARNING: Not for use in horses intended for food.

FOR ORAL USE IN HORSES

DIRECTIONS FOR USE: CAMVET Suspension is given by stomach tube or as a drench. To promote rapid flow through the stomach tube, CAMVET should be above 60°F (15°C). Shake well before using.

The dose of cambendazole in horses is 20 mg/kg. This is supplied when the drug is given at the rate of 1 fl oz/100 lb body weight.

For horses maintained on premises where reinfection is likely to occur, retreatments may be necessary. For most effective results, retreat these horses in 6 to 8 weeks.

CAUTION: Do not administer to pregnant mares during first 3 months of pregnancy.

Sorbic acid 0.1% added as preservative.

CAMVET Suspension is inactive against *Gasterophilus* spp. However, the product is compatible with carbon disulfide and may be given at the same time, if desired. Cautions ordinarily observed with carbon disulfide should be observed.

*Including members of the genera *Strongylus, Cyathostomum, Cylicobrachytus* and related genera, *Craterostomum, Oesophagodontus, Poteriostomum, Oxyuris, Strongyliodes*, and *Parascaris*.
